

ENERGY STAR® Qualified Appliances & Lighting

Now more than ever it's easier to save money, conserve natural resources, and protect the environment in our everyday lives.

APPLIANCES

All appliances have two costs.

The first cost is the purchase price that you pay at the store. The second price tag is the cost to operate the appliance over its lifetime. When adding these two costs, ENERGY STAR qualified appliances cost much less.

ENERGY STAR qualified clothes washers use up to 55% less energy and 50% less water.

In one year, that's more water than the average person drinks in a lifetime. Also, the drying time for clothes is reduced, because an ENERGY STAR qualified clothes washer's spin cycle is more effective.

Today's ENERGY STAR qualified refrigerators use half the energy

of a typical refrigerator in use today and saves up to \$100 annually. Plus, they provide all the features and convenience you want in today's kitchen.

Many dishwashers that carry the ENERGY STAR

are built with innovative technology to clean better while using less energy and water.

LIGHTING

ENERGY STAR qualified light fixtures and bulbs meet high standards

for energy efficiency and quality, so they use less energy without sacrificing performance or design. Plus, they distribute light evenly in natural colors.

According to the EPA,

changing out the five fixtures or light bulbs used most in a home to ENERGY STAR qualified lighting saves about \$60 every year in energy costs. And since energy-efficient bulbs use two-thirds less energy and last up to 10 times longer than other bulbs, you'll save on energy bills, plus the hassle of constantly replacing bulbs.

Ask your builder about ENERGY STAR.
